a
lab, pellet shared
lab, pellet per run
simulation
uniform covering
cost-weighted
minimum cost
random, same cost
median excess κ_t of pick (%)
batch cost relative to uniform covering
b
three-factor cells sampled (%)
runs in batch
random batches
pair covering
doubled pair covering
three-factor covering
c
covering, 33 to 36 runs
doubled, 61 to 66 runs
mid-run preemption (0.5%)
MACE, one faulty node (21%)
endpoint, node faults (51%, replayed)
size-free, node faults (53%, replayed)
endpoint, all first-attempt losses (87%)
pair cells kept, median (%)
