a
Two-factor combinations sampled (%)
Runs in the batch
random batches
covering, 1-fold
covering, 2-fold
one factor at a time
b
Batches still sampling every two-factor combination (%)
Runs lost
covering, 1-fold
covering, 2-fold
random, size of 2-fold
c
Excess κ_L of the chosen low-Ge composition (%)
33 runs
62 runs
one factor at a time
random
covering 1-fold
random
covering 2-fold
d
grain size
carbon form
Ge content
C content
temperature
B/P dopant
Relative importance for $\ln \kappa_L$ (%)
